

EPoSS 2022 - Convergent Photonics and Prima Electro among the protagonists of the Italian edition

This year Turin will host the EPoSS Annual Forum, an annual event that represents the most important meeting point for the Smart System Community: an international forum for in-depth analysis and updating on issues and trends in industry and research.

Moncalieri, 30 September 2022 - From 4 to 7 October, the MESAP Innovation Pole for Smart Products and Smart Manufacturing will host the EPoSS 2022 Annual Forum at the Unione Industriali Torino Congress Center. EPoSS, a European technological platform, targets at European research bodies and tech providers on electronics and intelligent systems.

On Thursday 6 October, during the conference, Convergent Photonics will present a speech on the European project iQonic. iQonic involved the Diode Fab of via Schiaparelli in the development of a scalable zero-defect manufacturing platform for optoelectronic components, which thanks to a series of sensors and with artificial intelligence techniques able to provide feedback on the quality of the process, made possible to reduce or even eliminate production defects.

The EPoSS forum is not limited to academic insights, but networking moments between major players in European industry and research, and Piedmontese companies involved in field visits, play a key role on the agenda. As MESAP Associates and partner of the event, on Friday 7 October, Prima Industrie and Prima Electro, respectively in Collegno HQTC and in Barone C.se plant, will host the visit of an international delegation of some important companies, including BOSCH, CONTINENTAL, ST MICROELECTRONICS, SIEMENS, FRAUNHOFER, CEA, and VTT.
